

GENERATE Licensing

OVERVIEW: Follow the steps below to obtain your machine-specific license for GENERATE. After copying and pasting the alphanumeric string into an email and sending to Frustum, you will receive back a .lic file which will only work for the machine this utility was run on.

STEPS:

1. Visit the GENERATE Support website (frustum.com/support)
2. **Download** the *License Utility* from the **Licensing** section of the Support site
3. Launch the *License Utility*
4. Depending on your computer's security policy, you might be prompted with the blue "Windows protected your PC" screen; if so, click **More info** and then click **Run anyway**

5. To generate the Machine ID, first click on one of the listed network interfaces; it is strongly suggested that you choose either a wireless or ethernet adapter; DO NOT select a virtual adapter
6. After selecting either a wireless or ethernet adapter, the Generate Machine ID button will become sensitive; click **Generate Machine ID** button

9. Please allow 24-48 hours for the license to be generated and emailed back to you
10. While awaiting license, follow this [link](#) to download the installer and run the executable (note that you must be online during the installation)
11. After you have received the email, and you have installed the GENERATE application, place the license file (generate.lic) in the installation directory for GENERATE, which is typically: **C:\Program Files\GENERATE**
12. Launch GENERATE to verify it works; if you have issues, please send an email to generate-support@frustum.com
